

Stop Burning Connects on Ghost Jobs.

Upwork charges up to \$3.60+ per proposal while hiding the exact signals you need to make an informed bid.

WHAT UPWORK SHOWS YOU

- Vague Competition: "20 to 50 proposals" (Is it 21 or 49?)
- Active Posting: Looks open, but someone was hired 2 days ago
- Advertised Budget: "\$50.00/hr" (Client paid history hidden)
- **Cost: 16-24 Connects (\$2.50-\$3.60+) burned on a dead listing**

WHAT UPWORK TOOLS UNMASKS

- Exact Proposals: 47 applicants (Pitch will be buried on page 3)
- Proposal Velocity: +14.2 / hr (Rapidly flooding listing)
- Position Status: 1/1 hired (Job already filled! DO NOT BID)**
- Real Average Paid: \$12.30/hr (vs advertised \$50/hr)
- True Hire Rate: 15% (Client posted 20 jobs, hired on only 3)

Never Bid Blind Inside a 30-Proposal Range.

Upwork groups 20 to 50 together. But 21 proposals is an early opportunity, while 48 proposals means you're buried.

▯ EXACT APPLICANT COUNT

38 Proposals

Extracted directly from Upwork's authenticated GraphQL response.

▯ REAL-TIME PROPOSAL VELOCITY

+4.2 proposals / hour

Know immediately if a job is flooding before spending 16 Connects.

▯ INTERVIEW ENGAGEMENT RATIO

7 Interviewed (18.4%)

See whether the client is actively reviewing submissions or ghosting.

Spot Serial Time-Wasters in Under 3 Seconds.

A 5-star rating means nothing if the client posts 30 jobs and only hires on 2 of them.

▢ TRUE HIRE RATE (Jobs Hired vs Posted)

Calculation: $\text{Total Hired Jobs} \div \text{Total Jobs Posted}$

- Normal Upwork badge: 'Payment verified • 32 jobs posted'

- **Upwork Tools Reality: Only 3 hires made = 9.3% Hire Rate** ▢

Save Connects: Don't bid on clients who routinely abandon jobs.

▢ REAL AVERAGE PAID vs HEADLINE

- Job Headline: '\$60.00/hr' (Attractive bait)

- **Client's Actual Historical Hourly Paid: \$14.50/hr**

- Median Fixed Contract Size: \$150 (not enterprise budget)

Know their real spending capacity before drafting a pitch.

Zero Risk to Your Upwork Account.

No bot automation. No DOM scraping. No duplicate requests.
Operates purely as a local observer on responses already received.

▯ Stream Cloning

Clones the GraphQL response
Upwork already loaded.
Makes ZERO duplicate fetch
or polling calls.

▯ 100% Local-First

No cloud backend.
No remote analytics.
No tracking pixels.
Everything stays on machine.

▯ Dual-Mode (v0.3)

Works on authenticated views
AND public visitor job links.
Browse logged out or in
incognito tabs seamlessly.

▯ 186 Tests Passing

Built with React 19 & Bun.
Manifest V3 compliant.
Ephemeral storage clears
when tab is closed.

100% FREE & MIT OPEN-SOURCE

Level the Playing Field. Free for the Community.

No \$15/month paywall. No affiliate traps.

An open-source public good built for Upwork freelancers.

OPEN SOURCE ON GITHUB

github.com/sfsajid91/upwork-tools

- Version: v0.3.0 Release Ready (Dual-Mode Edition)
- Stack: Manifest V3 • React 19 • TypeScript • Bun • Tailwind v4
- Verified: 186 unit & integration tests passing
